Professional Summary

Full-stack developer with 6 years of experience building and delivering scalable enterprise applications, high-throughput APIs, distributed systems, and event-driven solutions. Experienced in end-to-end feature ownership, from design and development through production release, support, and troubleshooting. Utilized AI-assisted development tools, Generative AI, LLMs, and prompt engineering to accelerate engineering workflows and productivity. Experienced in delivering reliable, high-quality software in Agile environments.

Skills

Languages: Java (8/11/17/21), JavaScript, TypeScript, Python, SQL
Frameworks: Spring Boot, Spring MVC, Spring Data JPA, Angular, React.js, Node.js, Express.js, Hibernate
DevOps & CI/CD: Jenkins, Docker, Terraform, Git, Maven
Cloud & Infra: AWS, Linux, Kubernetes
Technologies: GraphQL, WebSockets, Apache Kafka, gRPC
Databases: PostgreSQL, Redis, Sequelize ORM
Monitoring & Logs: Datadog, Splunk
Testing: JUnit, Mockito, Postman
AI & GenAI: GitHub Copilot, Generative AI, LLMs, Prompt Engineering, RAG, Agentic AI, AI-Assisted Development
Architecture & Design Patterns: Microservices, REST APIs, Event-Driven Architecture, MVC, Singleton, Factory, Builder, Repository, Dependency Injection (DI), SOLID Principles, Circuit Breaker

Experiences

Consultant, Capgemini – Bangalore (HP Client) June 2025 – Present

- Transition Management Central (TMC) – Enterprise Device Transition Platform
- Designed and developed Java Spring Boot microservices and REST APIs to manage end-to-end device transition workflows — from deal initiation through device installation and billing activation — for HP's global MPS and DaaS contract operations
- Built and maintained Angular (TypeScript) and React.js frontend features supporting internal and external users globally, delivering role-based workflows across enterprise operations teams
- Developed GraphQL and REST APIs to expose transition lifecycle data and implemented event-driven workflows using AWS SQS to handle asynchronous processing of contract and device transition events across distributed services
- Worked with PostgreSQL (Spring Data JPA, Flyway) for relational data management and Redis for caching and real-time pub/sub to support high-availability transition workflows
- Managed containerized deployments using Docker and Jenkins CI/CD pipelines, with infrastructure provisioned on AWS ECS, S3, and Secrets Manager using Terraform
- Monitored application health and resolved production issues using Datadog and Splunk, ensuring stability and reliability for a globally used enterprise platform
- Utilized GitHub Copilot, Generative AI, LLMs, and prompt engineering to accelerate code development, debugging, documentation, and test-case generation across engineering workflows

Software Engineer, SynapseWave Innovations – Mumbai January 2025 – June 2025

- Transferred from 63 Moons Technologies following the business transfer of the ODIN product division, with continuity of service
- ODIN – Financial Trading Platform (Employment transferred from 63 Moons Technologies)
- Developed and enhanced Java Spring Boot REST and GraphQL APIs supporting trading workflows and financial data processing for capital markets applications
- Built React.js frontend components supporting trading dashboards and financial data views for capital markets users
- Utilized AWS services including EC2, S3, and API Gateway as part of application development and production support activities
- Applied AI-assisted development tools to troubleshoot production defects and accelerate implementation across financial application workflows

Software Engineer, 63 Moons Technologies – Mumbai (Hybrid) August 2022 – January 2025

- ODIN – Financial Trading & Capital Markets Platform
- Developed and maintained Java Spring Boot backend services for high-throughput trading and financial applications serving capital markets clients
- Developed React.js frontend components supporting trading workflows, financial data, and interactive application features for capital markets users
- Built and optimized REST and gRPC APIs, contributing to an estimated 15% improvement in API response times through code optimization and efficient backend processing
- Integrated Kafka-based event-driven communication to process trading and business events asynchronously and support real-time financial workflows
- Implemented CI/CD automation using Jenkins and Docker, reducing release effort and deployment turnaround time by approximately 25%
- Utilized AWS services for application deployments, investigating and resolving production issues through log analysis and monitoring to ensure stability for financial trading platforms

Assistant System Engineer, Tata Consultancy Services – Remote (Noida) September 2020 – August 2022

- Developed and maintained Node.js backend services, REST APIs, and business logic for Employee Health Safety and Notification Management applications in a pharmaceutical client environment
- Implemented backend enhancements, bug fixes, and production support activities, ensuring application stability and reliability for pharma domain workflows
- Built React.js frontend features and UI improvements supporting healthcare and safety workflows for end users
- Collaborated with client stakeholders to gather requirements, contribute to testing, deployment, and documentation activities across Agile delivery cycles

Education

Maharishi Markandeshwar (Deemed to be University), Mullana, Ambala, Haryana – B.Tech (Bachelor of Technology) in Computer Science and Engineering 2016 - 2020

Certificates

AWS Certified Developer – Associate – Amazon Web Services April 2024

Introduction to Generative AI – Google Cloud September 2025

Python Essentials 1 – Cisco February 2025

LFS167: Introduction to Jenkins – The Linux Foundation January 2025

Software Engineer – HackerRank September 2024

React – HackerRank May 2024

JavaScript Algorithms and Data Structures – freeCodeCamp April 2023

SQL – HackerRank October 2021
